DEVOPS ENGINEER

DevOps Engineer with **4+ years** of experience specialising in **cloud infrastructure**, **containerisation**, and **automation**. Proven expertise in **AWS**, **Kubernetes**, **CI/CD**, and **infrastructure as code**. Demonstrated success in implementing **security upgrades**, **cost optimisation**, and maintaining **high-availability** systems.

SKILLS

Container Orchestration & Management: Docker, Kubernetes, Cilium CNI

(IaC) and Configuration Management: Ansible, Terraform

Programming Languages: Python, Shell Scripting

Cloud Services: AWS EC2, S3, Lambda, VPC, IAM, SQS, EKS, CloudWatch, SDK (Boto3), Azure

Logging and Monitoring: ELK Stack, OpenSearch, Prometheus, Grafana, Opentelemetry

CI/CD and Secret Management: Jenkins, Hashicorp Vault, AWS Secret Manager

Version Control System: GitLab, Git, BitBucket, Helm, GitOps, ArgoCD

Web Server: Nginx

Operating Systems: CentOS, Amazon Linux, Ubuntu

OpenSource Integrations: ElastAlert

PROFESSIONAL EXPERIENCE

Innovaccer

Site Reliability Engineer-I

Oct 2025 - Present

- Orchestrated the enterprise-wide rollout of **Cilium CNI** across **55+ distinct multi-tenant environments**, enhancing cluster networking efficiency, implementing namespace-scoped pod isolation, and hardening network security frameworks.
- Deployed **Karpenter autoscaling** engines across **55+ production client environments**, reducing node provisioning latency, optimizing compute resource scheduling, and slashing cloud expenditure.
- Led a massive **EKS 1.33 upgrade** campaign across **13+ production clusters**, patching runtime deployment blocks and post-upgrade validation tool in **Claude Code**, utilizing **automated** pod-status differential snapshots eliminating manual verification.
- Authored enterprise platform blueprints and **GitOps deep dives** for the **GitLab** stack
- Leveraged **advanced Kubernetes Database Operators** to **automate lifecycle** governance setups for business-critical databases.
- Led the urgent, successful mitigation of a catastrophic, business-critical **AWS MSK Kafka broker failure**, performing **root-cause analysis** to prevent future instability.
- Anchored high-stakes, **24x7 site reliability operations** across overlapping evening and night shifts, serving as the **primary escalation engineering** lead for **critical tier-1 production outages**.

Zupee

August 2025 - Oct 2025

DevOps Engineer

- Automated AWS resource management** by implementing comprehensive **tagging** strategy for **EC2 instances**, **EBS volumes**, and **ENIs**, improving **resource governance and cost tracking**.
- Managed multi-environment Kubernetes clusters** including k8s-game-stage with **resource optimization** across **5+** namespaces (cse-astro, cse-tp, cse-carrom, cse-cc, cse-tr)
- Successfully onboarded 17+ microservices** to Astro / Reels platform including payment, notification, user, & chat services, **streamlining deployment** processes.
- Contributed to DevOps strategy implementation through **infrastructure automation** and **cost optimization initiatives**.

Monotype Solutions

August 2024 - July 2025

Site Reliability Engineer-II

- Engineered log management using the **ELK stack**, enhancing the **Filebeat** configuration for improved log processing and saved up to **5%** of disk space.
- Diagnosed and resolved high latency from **72ms to 40ms** and recurring errors to **improve system performance and reliability**.
- Enforced **HSTS** policies ensuring secure **HTTPS** communication across **100%** of web traffic.
- Optimized **Horizontal Pod Autoscaler (HPA)** to handle load spikes during deployments with **0 downtime**.
- Achieved **\$22K** annual savings by optimizing **CloudTrail** logs and event history.
- Introduced and **standardized documentation** practices while providing technical mentorship to junior team members through comprehensive knowledge transfer sessions on **Terraform**, **Ansible**, and **Kubernetes**, enhancing team capability, reducing onboarding time, and streamlining processes across teams.

Paytm

November 2021 – July 2024

Devops Engineer

- Provisioned scalable infrastructure via **Terraform**: **IAM roles**, **ASGs**, **ALBs**, **target groups**, and **S3 buckets**.
- Streamlined **CI/CD** pipelines by developing **Jenkins jobs**, **integrated** with **S3**, **Ansible**, and **Shell scripts**, driving **automation** and **deployment** efficiency.
- **Automated** pre-billing reports with **Python (Boto3)**, improving accuracy and eliminating manual overhead.
- Integrated **ElastAlert** with **ElasticSearch** for **monitoring 4xx/5xx** API errors, strengthening system reliability and observability.
- Migrated legacy apps from **AMD-based CentOS** to **ARM-based Amazon EC2 Linux**, reducing **costs** and enhancing performance.
- Implemented **HashiCorp Vault** over **auto-scaling groups**, enabling **HA** infrastructure and **secure secrets management**.
- Instrumented **CloudWatch alerting** on **target groups** via **Terraform**, ensuring faster response to system health events.
- Managed **AWS account migration** for 3 business-critical apps with 0 downtime and complete dependency handover.
- Executed **patching initiative**, implemented **Packer** for **automated AMI** builds, clearing **1.5-year** security backlog with implementation of security best practices and compliance frameworks.
- Drove **5%** vertical-wide **AWS** cost reduction by identifying and decommissioning unused **AMIs**, **snapshots**, and **volumes**.

Bachelor of Computer Science Engineering

State University (September 2018 - May 2022)

83.4%
